Reflection Summaries for Projects

SU4S Reflection

To summarize, I touched on starting with being able to slightly understand HTML by copy and pasting blog widgets, backgrounds, and cursor customization for past blogs. I had difficulties with FileZilla too, but got the hang of it.

Project 1 Reflection

From the start, it felt like I was doing everything wrong. I had no idea what an internal and an external style sheet looked like in terms of making them. I understood the concept, but not the creating part. I had to start over/make my second website using an external style sheet after a classmate gave me a sense of direction. I had fun customizing and styling. I noted that I wanted to use Sublime Text more (I ended up doing so for the final).

Project 2 Reflection

This one felt much easier for me than Project 1. I didn't use Sublime throughout my process here just yet. I explain that this was easy to follow, just tedious. I had trouble linking anchors due to the fixed header sort of getting in the way of the "top of the page" (I actually had the same trouble again for my final, but I used lots of
 to push everything below the fixed header for starters). I learned probably the most in this project with getting the hang of the stylesheets and finding my way around instructions into making them my own thing. I was able to explain this project very well to those I'd show my site to.

Final Project

By far, one of the proudest and most encouraging projects. I felt like it was breeze and I caught myself genuinely enjoying the time I was spending on it. I tapped into my creativity in style and didn't feel so worried that I was going to "lose my place" or "ruin everything." I googled a lot of "how to..." questions with HTML and CSS in order to get the styling I wanted. I tried my absolute best to make this effective. I made a fake Instagram account called @TosteeCafe in order for the linking to the social media in the panel for "Meet the Team" to actually take you to a page. I also worked really hard on the "Meet the Team" page in general because I was learning a CSS and HTML code that I never used before in order to make staff cards. I messed around with the code and removed what I didn't want and added what I wanted. I was very proud of this project with its button-links, staff cards, Instagram page, and forms. I was most excited to learn forms, and though I faced a lot of error, I hope to learn how to use this more effectively again. I also used Sublime this time!
